3:30 pm

**Business Administration Building, Room B-29
University at Albany – Main Campus**

Dr. Gage is the Director of The Center for Social and Demographic Analysis and Professor of Anthropology, Epidemiology and Biostatistics, University at Albany, SUNY. He is interested in the evolution of life histories including the international, historic, pre-historic, and inter-ethnic variability of human demographic rates and the causes of this variability. His ongoing research into infant mortality is developing statistical models for fully implementing the “proximate determinants model” of infant mortality.
